Welcome

At the Alomere Health Cancer Center our team is dedicated to providing a full spectrum of cancer care with the highest standard of quality available. As a Commission on Cancer (CoC) accredited facility we are committed to providing high-quality, multidisciplinary, patient-centered cancer care. The Cancer Center team takes pride in serving the needs of the community and surrounding areas by addressing each patient's needs individually. With our commitment to provide quality patient care, the Alomere Health Cancer Center stands as a model of excellence for cancer care within our community.

On behalf of the Alomere Cancer Committee, we encourage you to review our annual report which displays our dedication to the patients and the community we serve as well as provides meaningful and helpful information.

Thank you,
The Alomere Health Cancer Committee

Mission Statement

Alomere Health Mission Statement:

Our passion and purpose is to strengthen and nurture the health and well-being of our family, friends, neighbors and communities through every season of life.

Commission on Cancer (CoC):

The CoC is a consortium of professional organizations dedicated to improving survival and quality of life for cancer patients through standard-setting, prevention, research, education and the monitoring of comprehensive quality care. Established by the American College of Surgeons in 1922, the multidisciplinary CoC establishes standards to ensure quality, multidisciplinary and comprehensive cancer care deliver in health care settings. Alomere Health achieved its first accreditation with the CoC in 2011, receiving an Outstanding Achievement Award (OAA). In July 2014, and 2017 the Cancer Center underwent the re-accreditation process and again achieved full CoC accreditation for an additional three years. Accreditation by the CoC demonstrates our cancer program's commitment to providing high-quality, multidisciplinary, patient-centered cancer care.

Other Accreditation:

Alomere Health is a community-based hospital located in West Central Minnesota, accredited by the Healthcare Facilities Accreditation Program (HFAP). HFAP was founded by the American Osteopathic Association (AOA) and is nationally recognized by the federal government, state governments, insurance carriers and managed care organizations.

Cancer Center Care Team

A wide range of patient-centered cancer care may include: medical oncology (chemotherapy), radiation oncology, diagnostic and interventional radiology, surgery, consultation, navigating the cancer experience, survivorship care planning and supportive services.

Oncologist and Hematologist

Marion B. Raflores, M.D.
Sanford Health Broadway Clinic

Dr. Raflores received her bachelor and medical degree from the University of the Philippines. She completed her Internal Medicine and Hematology Oncology fellowship at the Western Pennsylvania Hospital/Allegheny General Hospital in Pittsburgh, PA. She is board certified in Medical Oncology and Hematology. She treats adults with cancer, bleeding, clotting disorders, and other hematological problems. She is married with two children and enjoys traveling, snorkeling, and swimming.

Internal Medicine

Wade Swenson, MD
Hematology and Medical Oncology

Dr. Swenson received his Bachelor of Arts in Chemistry at Minnesota State University in Moorhead. He received his Doctor of Medicine from the University of North Dakota in Grand Forks. Dr. Swenson completed his internship and residency in Internal Medicine at the University of Iowa in Iowa City. He completed his fellowship in Hematology and Medical Oncology at the University of Iowa, where he also received a Master's Degree in Public Health specializing in Epidemiology. Certified by the American Board of Internal Medicine, Dr. Swenson is a member of the American Society of Clinical Oncology and the American Society of Hematology. Dr. Swenson has two children.

Cancer Center Care Team

Radiation Oncologist

Megan Hodges, MD
Board Certification: Radiation Oncology
CentraCare Radiation Oncology at
Alomere Health

Dr. Hodges provides compassionate, evidence-based radiation therapy to cancer patients using the latest technological advances. Dr. Hodges received her medical degree from Tulane University in New Orleans and is board certified in Radiation Oncology. She is married with three children, and enjoys spending time with her family and friends.

Physician Assistant

Christopher Nelson, P.A.
Sanford Health

Christopher Nelson is a native of Alexandria, MN, graduating from Jefferson High School. He received his B.S. at St. John's University, and his M.S in Genetics from Colorado State University. He earned his Physician Assistant Degree in 2000 from the University of Iowa. His work history includes outpatient cardiology in Wisconsin, and the majority worked in Maine including: Internal Medicine, Urology, Hospital Medicine, and Vascular Surgery. Christopher is married, and has two children. He enjoys hiking, biking, cross country skiing, kayaking, and spending time with his family.

Cancer Center Care Team

Licensed Social Worker

Ann Rivas - Vatsndal, LSW
Alomere Health Cancer Center and
Alexandria Clinic

Alomere Health welcomes Ann Rivas-Vatsndal, a licensed social worker in the State of Minnesota. Ann holds a Bachelor of Social Work from the University of Wisconsin-Superior. She describes her work background as “eclectic” with experience in child protection investigations, support for sexual assault and domestic violence victims, as well as various positions in Community Corrections.

Ann works with a variety of teams at Alomere Health. She joined the Oncology Team at Alomere Health in August, and is excited to be a part of the chemotherapy education process. Ann provides ongoing support, is a patient advocate, and assists individual needs as they proceed with medical treatment for cancer, or other medical diagnosis. “I really enjoy working as a part of the Oncology team to provide quality care to help people change, or maintain the quality of their lives,” says Rivas.

At the Alexandria Clinic she sits as a team member on with the Health Care Home Team, and the Controlled Substance Care Team. She performs individual consults with patients after receiving a referral from a provider. While nurses and providers are often focused on the health and wellness of the body, social workers may spend more time looking into the remaining areas of wellness. Ann says, “my job addresses conditions where people live, learn, work, and play which affect a wide range of health risks and outcomes. Every person that I have contact with is unique. I treat people with respect and they give me the privilege to help them.”

Cancer Center Care Team

Recognizing that Cancer affects the whole person, supportive services for patients and their families are provided on-site, or coordinated with local agencies.

Community resources that may be available include, but are not limited to:

- Home Health Services, Financial Resources, Meals on Wheels,
- Durable Medical Equipment, Transportation Needs,
- Health Care Directives, Nursing Home Placement,
- Hospice and Palliative Care Services

The key to communicating with an oncology social worker is to meet them in the first place. The earlier in the illness experience that patients, families, and caregivers meet with an oncology social worker, the more they are likely to benefit from the connection over time.

Patient Navigation

Stephanie Davidson, R.N.
Quality Improvement Nurse
CoC Administrator/
Oncology Nurse Navigator

The Oncology Nurse Navigator focuses on newly diagnosed lung cancer patients. As the process is refined, newly diagnosed Lung Cancer patients will work with the Nurse Navigator as a common entry point. By utilizing the Nurse Navigator, the goal is to enhance the patient's experience, and promote optimal outcomes for each patient.

Cancer Center Care Team

Alomere Health Cancer Committee

Alomere Health provides the highest quality of cancer care as evidenced through our ongoing accreditation of our cancer program by the American College of Surgeons (ACoS), Commission on Cancer (CoC). The goal of the Cancer Committee is to continually strive for clinical excellence and to improve the care and services provided to our cancer patients and families. Each year the Cancer Committee, in conjunction with a sub-committee, reviews the quality and quantity of services provided. This review helps to identify gaps, set goals to fill these gaps, and oversee the conduct of care improvement activities. These actions ensure we are always exceeding expectations and providing the highest level of patient-centered care.

Alomere Health 2018 Cancer Committee Coordinators

Marion Raffles, MD
Medical Oncologist, Cancer Liaison Physician,
Cancer Committee Chairperson

Stephanie Davidson, RN
Cancer Program Administrator, Community
Prevention and Screening Coordinator

Abby Kohler, RHIT
Tumor Registrar and Cancer Conference
Coordinator

Tracy Loar, CTR
Cancer Registry Quality Coordinator,
Cancer Registrar

Bonnie Freudenberg, RN, CPHQ
Quality Improvement Coordinator

Ann Rivas-Vatnsdal, LSW
Psychosocial Services Coordinator

Nicole Rudell, RN
Clinical Research Coordinator

Alomere Health 2018 Cancer Committee Members

Jonathan deHart, MD
Pathology

Mats Liden, MD
Radiology

Gina Brown, MD
General Surgery

Bryce Prellwitz, RN
Oncology Clinical Nurse Manager

Jason Peterson, RTT
Radiation Oncology Manager

Jonathan Schock, RPh
Director of Pharmacy

Margaret Kalina, RN, PhD
Chief Nursing Officer

Carl Vaagenes, CEO
Alomere Health Administrator

Roberta Strom, RD, LD
Dietician

Sue Quist, RN
Hospice and Palliative Care of Douglas County

Pamela Mason
American Cancer Society Representative

Cancer Services

Medical Oncology

The medical oncology unit features:

- Eleven semi-private, comfortable, individual treatment areas.
- Oncology-Certified Nursing Staff
- Nutritional Counseling
- Rehabilitation Services
- Navigation and Survivorship Services
- Individual patient and family education
- Onsite Laboratory Services
- Psychosocial Support and Services
- Access to Research Programs
- Referrals for Clinical Trials
- Referrals for Other Services

Radiation Oncology

CentraCare Radiation Oncology at Douglas County Hospital is a collaborative relationship between CentraCare Health System-Melrose and Douglas County Hospital. Our professionals are committed to providing patients with personal care and treatment.

CentraCare Radiation Oncology uses leading edge cancer treatment planning and technology:

- Varian iX Linear Accelerator – Delivers dual energy photon and electron therapy. The accelerator has the capability to perform 3-D conformal imaging, Intensity Modulated Radiation Therapy (IMRT) and Image Guided Radiation Therapy (IGRT).
- Philips Brilliance Computed Tomography (CT) Simulator – Delivers multi-slice imaging that enables retrospective respiratory gating with added treatment planning accuracy and capability.
- Philips Pinnacle Treatment Planning System.
- MIM Maestro Planning Software.

Cancer Services

CDI Imaging Services

A variety of diagnostic and interventional radiology studies are available at the Alexandria Center for Diagnostic Imaging (ACDI) which is located at the Douglas County Hospital.

The following advanced imaging services are available:

- High Field 1.5T MRI wide bore (Magnetic Resonance Imaging) – ACR Accredited Services include Neuro, Spine, Orthopedic, Body, Breast, and Prostate Scans
- 64 slice CT (Computed Tomography) – ACR Accredited. Some CT services offered include Neuro, Spine, Body, Cardiac, Orthopedic and Biopsy procedures
- Nuclear Medicine – ACR Accredited. Including Cardiac, Bone, Lymphangiography and Thyroid
- PET/CT (Positron Emission Tomography/Computed Tomography) – ACR Accredited PET/CT can be used to assist your physician with initial staging and restaging of certain types of cancer
- Ultrasound – ACR Accredited. Some ultrasound services include Body, Breast, Vascular, Biopsy procedures, Paracentesis and Thoracentesis
- Digital Mammography – ACR Accredited
- Stereotactic Breast Biopsy
- Diagnostic and Therapeutic Injections for pain and X-ray

Pathology

The pathologist assists the cancer team by diagnosing the presence of neoplasm and classifying tumor type. Important characteristics such as tumor grade, relative quantity as well as the location and degree of tumor extension are described. The adequacy of the surgical resection from the relevant tissue margins is also assessed. Occasionally, in follow-up specimens, the response to previous therapy is also assessed.

Cancer Services

Hospice

Hospice services are available to patients who have a terminal illness and are no longer seeking aggressive treatment of their disease. Because each patient's needs are unique, the hospice team works with patients and their caregivers to develop a personalized plan for their care. To support patients and their families, Hospice of Douglas County, Knute Nelson Hospice, and Glacial Ridge Hospice provides:

- Compassionate care by hospice team members.
- Registered Nurse on call twenty-four hours a day to answer questions and provide support.
- Coordination of care to maintain dignity and independence.
- Medications and treatments to manage pain and other symptoms.
- Necessary equipment, such as a hospital bed, oxygen, and supplies related to the illness.
- Teaching and expertise to enable families or other caregivers to provide the needed care.
- Grief support and bereavement services.

Palliative Care

Palliative Care is specialized medical care for people living with a serious illness such as cancer. Palliative Care, unlike hospice, can be offered simultaneously with life prolonging curative therapy. Patients and families facing a serious illness can get assistance in managing symptoms in order to achieve the best possible quality of life and improve ability to tolerate medical treatments.

Consider palliative care if you or loved one:

- Needs assistance in discussing goals of care.
- Suffers from pain or other symptoms due to any serious illness.
- Experiences physical or emotional pain that is NOT under control.
- Needs help understanding your situation and coordinating your care.

Hospice of Douglas County and Glacial Ridge Hospice currently offer palliative care services in the community.

Cancer Services

Rehabilitation Services

Rehabilitation services (occupational, physical, and speech therapy) are available at Alomere Health, the Alexandria Clinic and the YMCA. Physical, occupational, and speech therapists are adept at treating a variety of functional impairments related to cancer and the treatment of cancer. Services are tailored to each individual's needs, with the goal of maximizing function, reducing pain, and assisting the individual in returning to activities they love.

American Cancer Society Services

The American Cancer Society (ACS) has programs and services to help people with cancer and their loved ones understand cancer, manage their lives through treatment and recovery, and find the emotional support they need. The ACS may be able to help connect you to free or low-cost resources available in your area.

National Cancer Information Center (NCIC)

The NCIC is a 24/7 contact center, available every day of the year, for diagnosed cancer patients, their families, health care professionals and information seekers. NCIC is a highly trusted resource for cancer-related information, programs, and services, where staff can help guide patients and caregivers throughout their entire cancer journey by helping them understand cancer, manage their lives through treatment and recovery, and find the emotional support they need. Services are provided by phone by calling 1.800.227.2345 or online chat via www.cancer.org.

Reach To Recovery

The American Cancer Society Reach to Recovery program matches trained, volunteer breast cancer survivors with those facing or living with a breast cancer diagnosis to provide one-on-one support. Individuals are matched to volunteers who have had a similar diagnosis and treatment plan, and have a similar personal background.

Cancer Services

Hotel Partners Program

The Hotel Partners program is a cooperative effort with the American Cancer Society and local hotels that provide free overnight accommodations to cancer patients who must travel for outpatient treatment and need a place to stay. With at least 5 days advance notice, patients may receive this service provided they meet eligibility requirements. Lodging is also subject to availability and to restrictions imposed by the participating hotels. This service is available as a referral.

Cancer Registry

The Cancer Registry provides support for cancer program development, works to ensure compliance with regulatory reporting requirements/standards and serves as a resource for statistical cancer information. The Registry also coordinates the Commission on Cancer (CoC) accreditation process and ensures that Alomere Health meets or exceeds all CoC Program Standards. In addition to the primary functions of collecting relevant data on each cancer patient and conducting lifetime follow up, the Cancer Registry is involved in managing and analyzing cancer data; this clinical information is collected and analyzed for the purpose of education, research, quality of care and outcomes measurement. Cancer data is submitted to the Minnesota Cancer Surveillance System (MCSS) and the American College of Surgeons (ACoS) Commission on Cancer's (CoC) National Cancer Data Base so it can be used as a clinical surveillance mechanism to review patterns of care, outcomes and survival, with the ultimate goals of preventing and treating cancer effectively.

Quality & Outcomes

2017 Cancer Data Summary of Douglas County

During 2017, a total of 293 analytic cases were accessioned into the registry database. Analytic cases are patients whose cancers have been diagnosed and/or received first-course treatment at Alomere Health. The data collected for the registry includes the type, location, and extent of each cancer site. The registry also collects data on the initial treatment course plan and tracks patient outcomes as well survival and reoccurrence.

Top Cancer Sites in 2017

At Alomere Health the top five cancer sites in 2017 were: Breast, Prostate, Urinary Bladder, Lung, Blood and Bone Marrow. The below chart includes the number of patients diagnosed with the specific cancers, and the percentage of new cases in 2017.

BREAST	55	18.71%
PROSTATE GLAND	53	18.03%
URINARY BLADDER	29	9.86%
BRONCHUS & LUNG	21	7.14%
BLOOD & BONE MARROW	19	6.46%

Quality & Outcomes

Healthcare Directive

A health care directive is the document that specifies your desires for care at the end of life and identifies the person who will speak for you if you are unable to speak.

A living will is a document designed to control certain future health care decisions only when a person becomes unable to make decisions and choices on their own.

The CDC describes advance care planning as ensuring your wishes are known and honored if you are unable to speak for yourself. Your health care providers and others will use your health care directive to make decisions regarding your care, if you cannot make your desire known. Every adult over the age of 18 should complete a health care directive.

For more information, if you wish to have assistance in completing a Health Care Directive or to obtain a Health Care Directive document contact one of the following:

- The Written Gift at (320) 759-4243
 - www.thewrittengift.com
 - Emailing a request to thewrittengift@charter.net
- Your health care provider
- HonoringChoices.org
- Honoring Choices Minnesota at (612) 362-3704

The Written Gift

The Written Gift is a local non-profit corporation and initiative, dedicated to engaging the community in an advance care planning process while promoting end of life choices based on an individual's goals, values and beliefs. The Written Gift has available trained and certified Advance Care Planning Facilitators who can assist with completing a Health Care Directive.

Advanced Care Planning

Advanced care planning is the process that starts with identifying your healthcare values and preferences and exploring end of life options. It continues with an open discussion between you, loved ones, your health care agent, and your healthcare provider. The ideal result is the completion of a health care directive.

Focus on Lung Cancer

Each year, Alomere Health makes an effort to raise awareness about one of the top five sites of cancer seen in our Cancer Center. In 2018, based on Alomere Health cancer registry data, Alomere chose to highlight Lung Cancer. Our hope is to educate the community and reduce the incidence of late-stage Lung Cancer diagnosis.

Lung Cancer (both small cell and non-small cell) is the second most common cancer in both men and women. About 14% of all new cancers are lung cancer. The American Cancer Society's estimates for lung cancer in the United States for 2018 are:

- About 234, 030 new cases of lung cancer (121,680 in men and 112,350 in women)
- About 154, 050 deaths from lung cancer (83,550 in men and 70,500 in women)

Lung cancer is by far the leading cause of death among both men and women. Each year, more people die of lung cancer than of colon, breast, and prostate cancers combined. Lung cancer screening is an important tool for early detection and treatment.

Is Lung Cancer Screening Right For You?

More people in the U.S. die from lung cancer than any other type of cancer. This is due to the fact that most people discover lung cancer too late. Now there's an exam that can help detect lung cancer at its earliest stage, when it's most treatable.

At the Alexandria Center for Diagnostic Imaging (ACDI), a service of Alomere Health, we offer a broad range of medical imaging and related services, including low dose CT lung cancer screenings. Most insurers and Medicare will cover the cost of a lung cancer screening exam as long as you meet the eligibility criteria.

Focus on Lung Cancer

Who is eligible for lung cancer screening?

You may be eligible if you:

- Are 55-80 years old
- Are a current smoker
- Are a former smoker who has quit in the past 15 years
- Have a history of at least 30 pack years * of smoking
- Currently do not have signs or symptoms of lung cancer
- You may also qualify if you are a non-smoker who has had occupational exposure to environmental hazards such as asbestos.

**Pack years means: (number of packs smoked per day) x (number of years smoked). For example, a person who smoked two packs of cigarettes per day for 20 years has a history of 40 pack years smoking. This person would be eligible for lung cancer screening.*

Low Dose CT Screening

Dr. Laura Freeman, a radiologist from Alexandria CDI presented physician education on the importance of ordering Low Dose CT screening for patients that meet the criteria. This was presented at the Alexandria Clinic on April 2, 2018 and Sanford Clinic on April 19, 2018. A total of 24 providers attended the education.

In 2017 the number of Low Dose CT screenings that were completed from January through October was 91. In comparison to 2018, a total of 157 patients were screened. The LDCT screening increased by 40 additional screenings in comparison from April through October 2017 to 2018 after education was given to providers at Alexandria Clinic and Sanford Clinic.

Of the 157 patients, one patient was diagnosed with Stage 2B Lung Cancer. The additional patients will have a minimum of yearly screenings, and according to the patient's lung rad scoring, repeat imaging and tissue sampling, depending on the probability of malignancy, will be completed. A total of eight patients scored a lung rad of 4. The probability of malignancy is greater than 15%.

Focus on Lung Cancer

Education, Prevention, and Screening

Education, prevention, and screening are an essential component in the commitment to provide ongoing quality cancer care to the patients we serve and the surrounding area. The Cancer Committee continually assesses and organizes educational events that address the community's needs.

To promote cancer awareness in the community and prevent late-stage diagnosis, Alomere Cancer Program representatives attended various area activities in and around the community in 2018. The focus at these events is to include educational materials, encourage screenings, and promote discussions with primary care providers.

Education materials from the American Cancer Society were presented to attendees of the Douglas County Fair in August. These materials included information on Lung Cancer Screenings, Smoking Cessation, and Colon Cancer prevention and screenings.

Cigarette smoking remains the leading cause of preventable death and disease in Minnesota, and in the U.S; it accounts for more than 480,000 deaths every year. Over 16 million Americans have at least one disease caused by smoking.

The CDC states damage caused by tobacco use begins early in life. 80% of adult smokers report having their first cigarette before the age of 18. The Cancer Center 2018 Community Needs Assessment (CNA) noted increasing incidence of tobacco use amongst students from 3.6% of middle school students, and nearly triples to 9.4% of 9th graders. From 9th to 11th grade, the percentage of students smoking again more than doubled to 28%. (Based on 2015 data)

Focus on Lung Cancer

10th Grade Field Experience Day

Approximately 60 10th grade high school students participated in a brief interactive Power Point Presentation/ educational activity on the risks of tobacco. After the event, students were emailed a survey monkey to determine the value and effectiveness of the education provided.

By group feedback (rise of hands), the majority of students stated the education was helpful, and 100% of students stated they know how to get help to stop smoking/ using tobacco. As a result of the education based on survey monkey responses, 1 student stated they would try to quit using tobacco.

Only 8 of the students who participated in the event took the survey. **76%** stated the information was helpful. **80%** of students stated they were more aware of the dangers of tobacco. Of those students, **13%** stated they will try to quit smoking or using tobacco based upon the education received. **63%** of students stated based upon the information received they are likely to never start smoking or using tobacco products. **100%** of students stated, if needed, they knew how to get information and help to quit smoking. American Cancer Society Resources and Smoking cessation handouts were provided.

The data does not reflect the entire 10th grade student population; only a small percentage of students participated in the survey. However, the group of 10th graders who did respond to the survey, 3 of the 8 students or **37.5%** of responses indicated tobacco use in some form. In comparison to the 2018 CNA data, this is a higher percentage than the **28%** anticipated.

Alomere Health's plan is to focus on providing education to students on the dangers of tobacco, before they are exposed to and possibly start to use tobacco, and tobacco products that can lead to harmful addiction.

Thank You

The Cancer Center staff at Alomere Health understands that your cancer experience is unique. Our staff is here to guide you and your family through your cancer journey. Your cancer treatment may include medical oncology chemotherapy, radiation oncology, diagnostic and interventional radiology, surgery, and possibly consulting or supportive services.

The Alomere Cancer Center strives to provide personal care and treatment that includes both the physical and emotional needs of the patient and their family.

“Our passion and purpose is to strengthen and nurture the health and well-being of our, family, friends, neighbors, and communities, through every season of life.”
